

## **Front End Developer**

As a **Front-End Developer** at Computaris, you will be involved in software development projects in the field of mobile telephony, telecoms messaging and telecoms interworking using state-of-the-art technologies.

Why should you consider joining our team? Well, we constantly adapt to the modern ways of working. If your professional development is a key focus, you'll be glad to hear that we are sharp technology adopters. You'll learn a lot from company-paid trainings, as well as from our experienced team and from our very diverse international projects. One of our colleagues' favorite job perks is not getting bored even after 5 years with us!

Moreover, we are stubborn in doing things by the book – be it code writing & testing or employee treatment. Likeminded people will really appreciate this.

We are a charismatic bunch, so beware! You will experience that “I really want to go to work” feeling!

### **Here's what you will do:**

Implement web designs and user interfaces using HTML, CSS, JavaScript

Design and create advanced, responsive Web Applications

Write clean, well-engineered, maintainable code that conforms with accepted standards, and test web applications

Communicate effectively with project managers, technical leads, and other internal team members

Identify opportunities for process improvement and make constructive suggestions for change

Understand the goals and strategy behind each project from conception through completion

### **Here's what it takes to get here:**

University degree in Computer Science or a related discipline

Minimum 3 years of development experience of SPA-type applications;

Solid, proven experience with AngularJS framework;

Good knowledge of JSON, REST, AJAX, web sockets etc

Experience with dynamic style sheet languages (e.g. Sass/Less) and frameworks (e.g. Compass);

Experience with CSS frameworks (Bootstrap, Material, Foundation etc) and responsive design

Familiar with MVC and other design patterns;

Experience with version control

Excellent written and spoken English.

Highly motivated and ability to work in small teams.  
Ability to work under pressure and to strict deadlines.

**Cool to have:**

Ability to inject ng-ninja into an Angular application  
Some folks here love Typescript and Angular 2/4, do you?  
NodeJS experience will make you look even cooler, with a bonus of any backend languages  
As any savvy front-end developer, unit/e2e tests should be a second nature (with some jasmine scent here and there)  
NoSQL knowledge won't hurt to have  
Some for a pinch of Unix know-how
